ABSTRACT

From 1980 till 2016 I have got Odonata from Peru. Many deliveries with Odonata I got from several persons and I have collected a lot of Odonata species of Peru. All Odonata results were noted in a book and a database. This contribution contains the Odonata from Peru of the database.

INTRODUCTION

From 1980 till 2016 I have got Odonata from Peru. Many deliveries with Odonata I got from several persons over the time. The Odonata I have identified with the help of many literatures during the long time. The new species for my collection I have integrated in my collection. Hoffmann (2009) has reported 481 Species from Peru.

METHODS

Each individual results were noted in a book and given to a database. For identification the genitalia of male or female Odonata were prepared, photographed with the help of my binocular microscope using several references. All photographs I have made. One or more reference from a database I used and noted the figure numbers, after which I could identify these species. Number of specimens: No. /year (e. g. 100/2000), Abbreviations: m = male, f = female.

RESULTS

The following list contains the Odonata from Peru of the database. Nearly for all locations a geo-reference is described (Fig. 1).

For some species images are integrated. Most of them I have made. 1994 I have identified a lot of Odonata of the Museum Lima coll. in Peru, which I have got from Joachim Hoffmann.

Zygoptera

Calopterygidae: *Hetaerina amazonica* Sjöstedt, 1918, Peru, Iquitos, Loreto, S -4. 232473 – W -74. 217933, 95/2016: w, 2014-2015, leg. Josef Galic, Garrison, 1990, Heckman, 2008

DISCUSSION

In 1994 Joachim Hoffmann has given me a baggage of Odonata from the Museum Naturalis Lima. Many of these odonata were identified from Paulsen before. The odonata I could identify regarding the identification of Paulsen. The results are also presented in the paper of Hoffmann (2009). 23 species in my material are not mentioned in the list of Hoffmann (2009):

The following 10 species are found as additional in Peru according to the list of Hoffman (2009), but there are known from the near Amazonas area or from Peru, *Polythore merceda* (Peru), *Polythore neopicta*, *Polythore aurora*-Amazonas, *Polythore procera*-Amazonas, *Heteragrion bariai*-Ecuador, Peru, Venezuela, Rondonia, *Acanthagrion ascendens*-Trinidad, Colombia, Venezuela, Guyana, Surinam, Ecuador, Peru, Paraguay, Argentina, Santa Catarina, Sao Paulo, Goia, Mato Grosso, Rondonia, *Acanthagrion minutum*- Peru, Bolivia, Venezuela, Sao Paulo, *Psaironeura tenuissima*-Ecuador, Peru, Guyana, Para, Amazonas, Rondonia, *Microstigma anomalum*-Peru, Bolivia, Para, Amazonas, *Megaloprepus brevistigma*-Peru, Venezuela.

The other 13 species as new für the Peru fauna are the following species (after the species the location are given according to Heckman (2006, 2009): *Hetaerina duplex*-Colombia, *Hetaerina proxima*-Argentina, Bolivia, *Polythore mutata*-Ecuador, Colombia, *Heteragrion mitratum*-Colombia, *Acanthagrion dichrostigma*-Venezuela, *Acanthagrion cuyabae*-Bolivia, Argentina, Mato Grosso, Sao Paulo, Rio Grande de Sul, *Mesamphiagrion laterale*-Ecuador, Colombia, Venezuela, *Epipleoneura ocuene*-Venezuela, *Epigomphus paludosus*-Argentina, Paraguay, Minas Gerais, Sao Paulo, *Micrathyria almeidai*-Goias, Federal District, Minas Gerais, Sao Paulo, Rio de Janeiro, *Erythrodiplax abjecta*-Mexico, Central America, West Indies, Colombia, Ecuador, Venezuela, Mato Grosso do Sul, *Erythrodiplax nivea*-Sao Paulo, *Macrothemis imitans*-Central America, Trinidad, Venezuela, Guyana, Bolivia, Paraguay, Argentina, Santa Catarina, Sao Paulo, Mato Grosso.
